OUR PARTNER'S COMMITMENTS

Our partner factory employs **1,803 personnel**, with **100% of the workforce being Pakistani**, of which **4% are women**. The factory is deeply committed to environmental progress and responsible manufacturing.

- Reduced electricity consumption by **10% in 2024**.
- Guided by a dedicated **Environmental Committee** driving sustainable change.
- Certified to **ISO 45001, 14001, 9001, 50001** and **ISO 17025**.
- Members of **Manufacture 2030** and **Sedex**.
- Achieved a **9% reduction** in carbon footprint since 2024.
- Supports afforestation with the **Nature Conservation Society of Pakistan**, planting **9,300 trees**.
- Uses **100% recycled packaging**, reducing plastic pollution across the supply chain.
- **23% of energy** in 2024 was generated from **renewable sources**.

WASH CARE

Caring for this garment responsibly helps reduce its environmental impact.

- Use a microfibre filter or wash bag to help protect oceans and waterways.
- Machine wash at **40°C**.
- **Do not tumble dry.**
- Wash inside out and with similar colours.
- Use liquid detergent and **avoid fabric softeners.**
- Wash less often — spot clean when possible and run full loads to minimise friction and resource use.

RECYCLING SCHEME

End-of-Life: What happens to hi-vis and workwear?

Used textiles such as hi-vis and general workwear go through a structured recycling process to maximise material recovery.

1. **De-trimming & Cutting**
   Zips, buttons, reflective strips and other non-textile components are removed.
2. **Mechanical Shredding**
   Garments are mechanically torn, pulled and ground into smaller fibres.
3. **Blending & Classification**
   Fibres are sorted based on length, composition and cleanliness.
4. **Bagging & Storage**
   The processed fibres become WPF (Waste Processed Fibre), ready for reuse in downstream manufacturing.
