## HYDROSTATIC HEAD RATING

A hydrostatic head rating is a measure of how waterproof a certain fabric is; this indicates the amount of pressure the material can withstand before it starts to leak through. This test is measured in millimetres (MM), which refers to the height of a column of water that the fabric can resist.

In the UK, waterproof workwear must comply with the BS EN 343 standard, which ensures the safety of workers exposed to rain by addressing both water penetration resistance and breathability.

| Class | Waterproof rating (mmH20) | Performance |
|---|---|---|
| **Class 2** | > 800MM | Basic water resistance |
| **Class 3** | > 8,000MM | Medium waterproof |
| **Class 4** | > 13,000MM | Highly waterproof |
