

**BRIEF DESCRIPTION:**

Dammit Plugging Compound 500g Tub

**DESCRIPTION:**

Ready-mixed plugging compound for quick sealing of damaged containers. No surface preparation is necessary. Temporarily plugs the leak for 1 – 2 Hrs (up to 24 Hrs dependant on conditions) even when the surface is dirty, greasy or rusty and has material flowing over it. (Will hold up to about 8 feet of head pressure). Take a handful and apply directly over and around leak. The initial contact of Dammit may only partly adhere to the surface. Work it and press down to get good adhesion. If conditions are hot & dry, keeping the plug damp will extend its working life. Non-toxic and non-flammable.

Store above freezing point. After use, tightly close the container.

Not suitable for Phosphoric acid, Hydrofluoric acid, Sulphuric acid 96%, Triethylamine 99%, Hydrogen peroxide 15%.

**ABSORBENCY / CAPACITY:**

N/A

**DIMENSIONS:**

0.5kg

**APPLICATION:**

Containment
